Education

Stevens Institute of Technology

BS in Computer Science

Expected Graduation: May 2027

- **Selected Coursework:** Data Structures, Discrete Structures, Computer Architecture and Organization, Algorithms, Theory of Computation, Database Management Systems, Software Development Process, Operating Systems, Systems Programming, Programming Languages, Security, Intermediate Statistics.

Technical Skills, Honors & Awards

Language & Skills: Python, C++, Java, JavaScript, C, C#, Git, GitHub, VScode, OCaml, React, Linux, ML, Full-Stack, End-To-End, User-Facing, DBMS, Cloud, Theory, Optimization, Devices, Services, SW/FW/HW Integration.

Honors & Awards: Dean's List, Edwin A. Stevens Scholar, Presidential Achievement Scholar.

Selected Personal Projects

Campus Parking Prototype Website — *HTML, CSS, JavaScript, GitHub*

- Collaborated on a campus parking availability prototype using HTML, CSS, and JavaScript.
- Developed responsive user interfaces to simulate real-time parking availability.
- Worked with teammates to translate project requirements into an interactive web application.

Document Scanner — *Python, OpenCV, NumPy*

- Developed a document scanner using Python and OpenCV capable of detecting document boundaries and applying perspective transformation.
- Implemented contour detection and grayscale image processing to improve readability of scanned documents.
- Automated note digitization for school documents.

Internship Tracker — *React, JavaScript, HTML, CSS, Spring Boot, PostgreSQL, REST API, GitHub*

- Developing a responsive web application for tracking internship applications, interview stages, and offer status.
- Designed an interactive dashboard to organize companies, positions, application dates, and outcomes.
- Built using HTML, CSS, and JavaScript with plans to integrate PostgreSQL for persistent data storage.

URL Shortener — *Java, Spring Boot, PostgreSQL, REST API*

- Designed and developed a RESTful URL shortening service capable of generating unique short links and redirecting users to original URLs.
- Built a PostgreSQL-backed persistence layer for storing URL mappings, expiration dates, and click analytics.
- Implemented input validation, duplicate URL detection, and exception handling while following REST API best practices.

Movie Recommendation System — *Python, Machine Learning*

- Developed a recommendation engine using collaborative filtering techniques to suggest movies based on user preferences.
- Processed datasets containing thousands of ratings to generate personalized recommendations.
- Evaluated recommendation accuracy using similarity metrics and ranking algorithms.

Expense Tracker — *Java, Spring Boot, React, PostgreSQL*

- Developed a full-stack application allowing users to create, edit, categorize, and analyze personal expenses.
- Designed REST APIs for transaction management and integrated a PostgreSQL database for persistent storage.
- Implemented data visualization features to summarize monthly spending and budgeting trends.

Leadership & Activities

Club Member

Steven's Computer Science Club

Hoboken, NJ

September 2023 – Current

- Collaborated with fellow club members to organize and participate in coding workshops, hackathons, and tech talks, fostering a vibrant learning community.
- Actively engaged in discussions and presentations on emerging technologies and programming languages, sharing knowledge and insights with peers.
- Contributed to club projects by developing and testing code, while enhancing problem-solving and coding skills.

Professional Experience

Crew Member

AMC Theaters

Hackensack, NJ

December 2023 – Current

- Served hundreds of customers during high-volume shifts while maintaining exceptional customer service.
- Collaborated with team members to reduce customer wait times and improve operational efficiency.
- Maintained food safety, cleanliness, and quality standards in a fast-paced environment.
