

EDUCATION

Stevens Institute of Technology – B.S. Computer Science, Minor in Applied Mathematics, 3.7/4.0

Aug 2024 – Dec 2027

Relevant Coursework: Algorithms, Data Structures, Computer Architecture & Organization, Principles of Programming Languages, Database Management Systems, Theory of Computation, Web Programming, Mathematical Foundations of Machine Learning, Discrete Structures, Linear Algebra, Intermediate Statistics**Honors:** Upsilon Pi Epsilon (UPE), Dean's List (All Semesters), Presidential Scholarship, Edwin A. Stevens Scholarship

EXPERIENCE

Department of Computer Science, Stevens Institute of Technology**Hoboken, NJ***Course Assistant, Introduction to Computer Science* | Python

Present – Dec 2026

- Lead recitations, hold office hours, and grade for 30+ students while providing hands on one on one debugging and conceptual mentorship.

Stevens Institute for Artificial Intelligence (SIAI)**Hoboken, NJ***Research Assistant* | Python, FastAPI, Next.js, Multimodal AI, Vision-Language Models

May 2026 – Aug 2026

- Built a full-stack platform for AI-powered clinical concept map assessment in collaboration with Hackensack Meridian School of Medicine, integrating multimodal LLMs, rubric-based grading, evidence extraction, interactive dashboards, and configurable model selection.
- Benchmarked multimodal vision-language models against expert-generated concept maps, evaluating scoring accuracy, consistency, hallucination patterns, explainability, and agreement with human-generated rubric assessments to improve automated grading reliability.

GENIE AI**New York, NY***Software Engineering Intern* | NestJS, Node.js, PostgreSQL, Next.js, Docker, Jenkins, CI/CD

Oct 2025 – May 2026

- Architected and shipped RESTful APIs for a property analytics platform, designing normalized PostgreSQL schemas supporting tenant workflows, property analytics, and usage metrics across 10+ microservices used by 3 cross-functional teams and internal stakeholders.
- Diagnosed and resolved production data inconsistencies by tracing request flows across distributed systems, eliminating schema mismatches responsible for 15% of nightly batch failures while preventing recurring data loss across critical production services.
- Optimized Jenkins CI/CD pipelines by parallelizing test execution and introducing Docker layer caching, reducing deployment time from 15 to 2 minutes while enabling 4x more frequent production deployments and supporting faster, more reliable software releases.

TruClaim**Remote***Software Engineering Intern* | Flask, Python, PostgreSQL, REST APIs, CI/CD

May 2025 – Aug 2025

- Built and deployed backend services for a production claims screening platform using Flask and PostgreSQL, implementing rule-based validation workflows that reliably processed 200+ insurance claims weekly across multiple provider submissions and clinical specialties.
- Automated claims validation using Python and SQL triggers, eliminating 15 hours/week of operational overhead, reducing validation errors by 22%, and increasing test coverage to 85% through comprehensive unit and integration testing across core validation workflows.

PROJECTS

IBM Docling [🔗](#) | Python, Git, GitHub Actions, Pytest, Open Source

Jun 2026 – Present

- Resolved a Windows resource leak in IBM Docling's document conversion pipeline by identifying incorrect backend ownership during pipeline initialization failures, implementing targeted cleanup logic, and preventing file handle leaks while preserving error propagation.
- Strengthened conversion reliability by adding regression tests for initialization and invalid-input cleanup paths, collaborating with maintainers and external contributors through code review, CI validation, and DCO compliance to deliver a merged upstream contribution.

OfferOS [🔗](#) | Next.js, FastAPI, PostgreSQL, SQLAlchemy, TypeScript, Clerk, Docker

Jun 2026 – Aug 2026

- Designed and built an all-in-one career management platform enabling authenticated users to track job applications, resumes, interview preparation, recruiting workflows, and career analytics across a single unified, multi-user workspace built with Next.js and FastAPI.
- Architected a multi-tenant backend with SQLAlchemy, Alembic-managed migrations, and a repository-pattern data layer to enforce ownership-scoped access across all REST endpoints, integrating Clerk for authentication and Docker for consistent deployment.

OpsPilot [🔗](#) | Next.js, TypeScript, Slack APIs, GitHub APIs, OpenAI, PostgreSQL, Neon, Vercel

Jun 2026 – Jul 2026

- Built and deployed a multi-tenant Slack AI engineering agent enabling workspace-specific Slack and GitHub OAuth, natural-language conversations, repository audits, incident investigations, and interactive Block Kit workflows for engineering operations.
- Architected a tool-based reasoning pipeline that correlates GitHub commits, deployment history, Slack context, and incident data to generate grounded risk assessments, test plans, release notes, and postmortems with persistent PostgreSQL context.

RecruitIQ [🔗](#) | Next.js, React, TypeScript, Amazon Aurora PostgreSQL, Prisma, Vercel (Amazon AWS Hackathon)

May 2026 – Jul 2026

- Built an AI-powered applicant tracking system supporting resume parsing, candidate ranking, Kanban-based pipeline management, and hiring analytics, architected using Next.js and Amazon Aurora PostgreSQL and shipped within a competitive AWS hackathon timeframe.
- Designed a Prisma-modeled Aurora PostgreSQL schema and deterministic resume-parsing pipeline to extract structured candidate data, then built a Recruiter Copilot routing evaluations through configurable OpenRouter models with server-side fallbacks for reliable scoring.

SKILLS

Languages: Python, TypeScript, Java, JavaScript, HTML/CSS, SQL**Technologies:** FastAPI, Node.js, React, Next.js, PostgreSQL, SQLAlchemy, Prisma, Docker, AWS, CI/CD (GitHub Actions, Jenkins), REST APIs, Git**Certifications:** AWS Cloud Practitioner (2025) | AWS AI Practitioner (2026)
