PROFESSIONAL SUMMARY

Software engineer with full-stack web development experience and hands-on work in real-time interactive systems. Skilled in Python, JavaScript, and Node.js, with a track record of building data-driven features, translating technical concepts for broad audiences, and contributing across the full development lifecycle.

EXPERIENCE

Assistant to the Director of Undergraduate Research and Fellowships

Aug 2026 – Present

Stevens Institute of Technology

- Coordinate logistics for fellowship workshops, supporting event planning and student turnout.
- Maintain department intranet webpage, keeping program information accurate and current for the student body.
- Design advertising materials and plan social media content to promote university scholarships and fellowships, increasing student awareness of opportunities.

News and Science Writer

Sep 2023 – Feb 2024

The Stute

- Researched and wrote 6 published news and science articles, translating technical and bureaucratic source material into clear, engaging copy for a general student readership.
- Interviewed a project architect and analyzed published municipal proposals to report on the Hoboken Maritime Park redevelopment, verifying claims against primary source documents.
- Covered university biomedical research by reading source studies and press releases and independently researching technical vocabulary, translating complex concepts into accurate, accessible language.

PROJECTS

Delicacy | Restaurant Cleanliness Rating Web App

- Built front-end pages in Handlebars and implemented input validation to prevent malformed and malicious data submissions, strengthening app reliability and security.
- Engineered comments and reviews data layer with comment/reply threading and user profile views, powering real-time hygiene reviews and interactivity.
- Developed inbox alert and notification feature for real-time user updates.
- Implemented admin dashboard with moderation controls and profile management for platform oversight.

Neonova: IoT Hugs the Lanes

- Led a team through an iterative process model to define goals and iterations for self-driving vehicle software documentation.
- Authored 7 sections of technical documentation and demo code, translating complex engineering concepts for non-technical stakeholders.

Expressions | Interactive Installation

- Programmed state-driven logic in Python to enable time-based transitions in a real-time generative particle system driven by facial pose recognition.

EDUCATION

Stevens Institute of Technology

Bachelor of Science, Computer Science. Minors: Visual Arts & Technology, Science Communications.

May 2027

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Systems Programming, Computer Architecture, Database Management, Web Programming, Data Visualization, Wireless Communications, Discrete Structures, Statistics

SKILLS

Programming: Python, JavaScript, Java, C, C++, ARM Assembly, HTML/CSS, React, Node.js

Systems & Tools: Git/GitHub/GitLab, Database Management (MongoDB), Computer-Aided Design, Information Architecture

Core Skills & Languages: Cross-functional Collaboration, Research & Technical Writing, Spanish & English (Bilingual/Fluent)

CERTIFICATIONS

- IBM Introduction to Cloud Computing (2024)

AWARDS & HONORS

- Rutgers RAISE-26 Finalist (2026)
- Hispanic Scholarship Fund Scholar (2023 & 2024)
