EDUCATION

Stevens Institute of Technology

Bachelor of Science in Computer Science

Hoboken, NJ

Expected May 2028

- GPA: 3.8 | Dean's List
- **Relevant Coursework:** Data Structures & Algorithms, Computer Architecture, Programming Languages, Theory of Computation, Database Management Systems, Discrete Mathematics, Probability & Statistics, Intermediate Statistics, Multivariable Calculus, Mathematical Foundations of Machine Learning

EXPERIENCE

FlexTrade Systems

Software Engineering Intern

June 2026 – August 2026

Great Neck, NY

- Built a 5-agent LLM engineering system integrating Jira via MCP, Git, and repository search; adopted by the full 15-person engineering team, processing 80+ tickets across the full planning, implementation, validation, and QA lifecycle.
- Engineered a multi-agent incident-diagnostics system for 50K+ line FlexTrader application logs, utilizing targeted retrieval and source-code tracing to cut LLM context requirements by 90% while achieving 88% root-cause accuracy across 40 labeled incidents.
- Developed an agentic C# UI-testing system with FlaUI/Windows UI Automation that interprets Jira tickets, autonomously executes live FlexTrader application workflows, and generates regression tests across trading workflows.

Renascent Media

Software Engineering Intern

June 2025 – December 2025

Edison, NJ

- Deployed a self-hosted Qwen3-14B LLM via Ollama on a Mac mini with automated web discovery, entity extraction, deduplication, and campaign-fit scoring, ranking 5K+ prospects with 82% qualification precision on a 250-prospect manually reviewed evaluation set and tripling qualified-lead discovery volume.
- Developed an internal RAG system over 40K+ chunks from 1,200+ campaign documents using metadata-filtered vector retrieval and source-grounded generation, achieving 91% Recall@5 across 120 benchmark queries on prior client discussions and performance context.
- Engineered a React/Node.js campaign-operations dashboard with PostgreSQL-backed workflow state and approval logic, centralizing delivery workflows for 15 active projects across 10 client accounts.

Cornell University – Cornell Tech

AI Research Intern

June 2024 – August 2024

New York, NY

- Engineered prototype components for a real-time AAC pipeline in Next.js/React on Vercel, integrating Amazon Transcribe, GPT-4, and Amazon Polly for streaming speech recognition, context-conditioned generation, and neural TTS.
- Integrated transcript-aware context retrieval and prompt orchestration to condition GPT-4 on live dialogue and user cues, generating 3 response candidates per invocation and achieving 80% positive timeliness across 327 coded interactions.
- Re-architected a React Native prototype into a device-independent web platform supporting eye-gaze, touch, and keyboard/mouse input; resulting research paper earned a CHI 2025 Best Paper Honorable Mention and Jury Best Demo.

PROJECTS

GetClipped | Computer Vision, Multi-Object Tracking, Python, React

March 2025 – Present

- Engineered a multi-stage basketball vision pipeline combining BoxMOT, custom-trained OSNet re-identification, SAM2 tracklet extension, and VLM-based 2PT/3PT classification to generate player-level stats and highlights from single-camera footage.
- Fine-tuned OSNet on basketball-specific footage and integrated SAM2 with BoxMOT to extend fragmented tracklets through occlusion, reducing player ID switches from 38 to 11 (71% reduction) against a BoxMOT-only baseline.
- Designed a staged ML validation workflow across 3 parallel model pipelines, progressing from component tests to full-game evaluation; achieved 74% precision and 69% recall across 1,500+ labeled scoring/rebounding events from 6 games.

Pairs Trading Execution Model – FlexTrade Systems | Python, pandas, NumPy, statsmodels

June 2026 – August 2026

- Designed a pairs-trading execution estimator combining the eligibility diagnostics with self-constructed intraday volume curves and POV constraints to predict fill-completion buckets; backtested against 35 realized executions, correctly predicting the target bucket 71% of the time.
- Built a statistical eligibility pipeline using Engle-Granger cointegration, ADF/MacKinnon testing, AIC/BIC lag selection, Ornstein-Uhlenbeck half-life, and Epps-effect-aware correlation checks, rejecting 62% of candidate pairs that failed mean-reversion stability criteria before execution estimation.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, C#, JavaScript, TypeScript, SQL, OCaml, R, Swift, HTML/CSS

Tools & Frameworks: React, React Native, Next.js, Node.js, Express, Flask, FastAPI, PyTorch, TensorFlow, Hugging Face, OpenCV, pandas, NumPy, statsmodels, PostgreSQL, LangChain, AWS, Google Cloud Platform, Docker, Git, Kafka, Vercel, Jira, MCP, FlaUI, Windows UI Automation

Concepts: LLMs, Retrieval-Augmented Generation, Multi-Agent Systems, Machine Learning, Deep Learning, Computer Vision, NLP, Embeddings, Vector Search, Object Tracking, Re-Identification, Feature Engineering, Model Evaluation, Statistical Inference, Time-Series Analysis, Econometrics, Cointegration, Mean-Reversion Modeling, Stochastic Processes, Backtesting, Model Validation, Market Microstructure, Software Engineering, Databases, Full-Stack Development, Data Science, Research
