EDUCATION

Stevens Institute of Technology

Hoboken, NJ

B.S. in Computer Science, Mathematics Minor, Pinnacle Scholars Honors Program (4.0 GPA)

Graduating May 2027

Coursework: Data Structures, Algorithms, Computer Architecture and Organization, Discrete Structures, Linear Algebra, Differential Equations, Multivariable Calculus, Introduction to Computer Science

EXPERIENCE

Blueprint

August 2025 - Present

Software Engineer

Hoboken, NJ

- Currently designing and implementing a backend architecture to support Genxl's (Client) international platform for over 50k+ applicants, 2k+ instructors, 44 global chapters with scalable APIs and optimized database structures.
- Creating a Content Management System using PayloadCMS to allow non-technical staff to effectively maintain and edit a website using React, TypeScript, Next.js, and MongoDB.
- Exploring the integration of an administrative dashboard for SEO configuration, analytics monitoring (Google Analytics).

Quantum Pulse Consulting

October 2025 - Present

Software Engineering Intern

Remote

- Currently developing full-stack web applications for clients using React and PostgreSQL with RESTful API implementation, authentication, and data handling with Firebase.
- Using AWS and CI/CD pipelines to manage builds and releases, and reducing downtime for maintainable software delivery.
- Collaborated cross-functionally in Agile sprints for scalable software delivery through KR feature iterations and standups.

Stevens Institute of Technology - Oregon Road '83

May 2025 - August 2025

Undergraduate Research Assistant/ Software Developer

Hoboken, NJ

- Integrated story-driven programs into a custom event engine, ensuring custom content in a large game development project.
- Developed interactive event scripting in a JavaScript DSL, using branching logic, metadata validation, and state-driven triggers to deliver 30+ dynamic, replayable player experiences.
- Programmed NPC behavior systems that adapt to game context, leading to a 150% increase in NPC to user interactions

Steamworks Studios

May 2023 - August 2024

Lead Robotics/Computer Science Instructor, Intern

Monroe Township, NJ

- Developed coursework and projects for the Java Programming summer course, which taught 30+ students OOP fundamentals.
- Led the Robotics Program in which I taught 20+ students the engineering and programming of a Lego Spike Robot for First Lego League and World Robot Olympiad; FLL team went to State Finals and WRO team went to National Championship.

PROJECTS

"Productivity ++" Productivity Application | *Flask, Python, SQLAlchemy, Vercel*

June 2025 – Present

- Developed a Flask Python full-stack app designed to improve users' productivity by over 25 in trial runs with secure authentication (Werkzeug), REST/JSON APIs, a robust ES6 state machine for session timing, and a Bootstrap/Jinja UI.
- Designed an indexed relational schema and implemented aggregate queries that run sub 100 ms using an SQLAlchemy database to power an interactive productivity analytics dashboard designed and tested to store 1000+ sessions.
- Currently designing an NLP-powered AI distraction-checking journal using spaCy for focus insights to minimize distraction.
- Deployed beta version with Vercel and connected to GitHub for seamless deployment and updateability.

Lincoln and Holland Tunnel Catwalk Model | *C++, Odometry, PID*

November 2023 – March 2024

- Developed a model to repurpose a tunnel catwalk using different autonomous controllers for the Port Authority of NY/NJ.
- Developed, tested, and optimized a functional prototype powered by PID Algorithms and Odometry to create a self-correcting autonomous drivetrain that allowed for precise navigation through obstacles.

VEX Competition Robotics | *Captain of Competition Team, Chapter Vice President*

May 2022 – June 2024

- Captain, Driver, and Programming Head of VRC Team 96138B. Led a group of programmers in programming an autonomous function using C++, which allowed the team to place 9th in the State, advance to World Championship.
- Taught 50+ underclassmen C++ programming to create instant-time driver controllability and autonomous task completion.

TECHNICAL SKILLS

Programming Languages: Python, Java, C/C++, SQL, JavaScript, TypeScript, R, Assembly, HTML/CSS

Frameworks: Flask, React, Node.js, spaCy, PostgreSQL, FastAPI

Developer Tools: Git, Docker, Firebase, AWS, Vercel, Plaid, Postman

Libraries: pandas, numpy, matplotlib, scikit, pytorch, OpenAI, requests
